

Assignment1-Ansible

Deploying three (3) Virtual Machines

Deployed three VM's with OS as ubuntu using Amazon EC2 instances in Aws portal and naming one the server and the other 2 machines as vm1 and vm2 and generating keypair in order to access the other vm's from the server

Instances (3) Info									
<input type="text" value="Find Instance by attribute or tag (case-sensitive)"/>									
<div>Refresh Connect Instance state ▼ Actions ▼ Launch Instances</div>									
<div>< 1 > Settings</div>									
<input type="checkbox"/>	Name ▼	Instance ID	Instance state ▼	Instance type ▼	Status check	Alarm status	Availability Zone ▼	Pub	
<input type="checkbox"/>	vm2	i-0351f670c7db837cd	Running 🔍	t2.micro	2/2 checks passed	No alarms +	us-west-1c	ec2-	
<input type="checkbox"/>	vm1	i-0f6804e9f1876cecb	Running 🔍	t2.micro	2/2 checks passed	No alarms +	us-west-1c	ec2-	
<input type="checkbox"/>	server	i-06d301a42fa752b36	Running 🔍	t2.micro	2/2 checks passed	No alarms +	us-west-1c	ec2-	

Installing Ansible on the server

- (i) `cd .ssh`
- (ii) `sudo apt-get update && apt-get upgrade`
- (iii) `sudo apt install ansible`
- (iv) `ansible --version`

```
272 — ubuntu@ip-172-31-20-20: ~/.ssh — ssh -i keypair.pe...
Running kernel seems to be up-to-date.

Restarting services...
Service restarts being deferred:
/etc/needrestart/restart.d/dbus.service
systemctl restart networkd-dispatcher.service
systemctl restart systemd-logind.service
systemctl restart unattended-upgrades.service
systemctl restart user@1000.service

No containers need to be restarted.

No user sessions are running outdated binaries.

No VM guests are running outdated hypervisor (qemu) binaries on this host.
ubuntu@ip-172-31-20-20:~/.ssh$ ansible --version
ansible 2.10.8
  config file = None
  configured module search path = ['/home/ubuntu/.ansible/plugins/modules', '/usr/share/ansible/plugins/modules']
  ansible python module location = /usr/lib/python3/dist-packages/ansible
  executable location = /usr/bin/ansible
  python version = 3.10.6 (main, Aug 10 2022, 11:40:04) [GCC 11.3.0]
ubuntu@ip-172-31-20-20:~/.ssh$
```

Uploading the keypair.pem file into the server for further connections with the remaining VM's

```
scp -i desktop/sanjay/272/keypair.pem -r desktop/sanjay/272/keypair.pem ubuntu@ ec2-50-18-5-43.us-west-1.compute.amazonaws.com:/home/ubuntu/.ssh/keypair.pem
```

Generating a hosts file

It contains the details of the two VM's into which we need to install apache and send the message

Hosts file

```
[apache]
vm2 ansible_host=13.57.242.177 ansible_ssh_private_key_file=keypair.pem
vm3 ansible_host=3.101.63.112 ansible_ssh_private_key_file=keypair.pem

[all:vars]
ansible_python_interpreter=/usr/bin/python3
```

Generating an index file to display message

Index.html

```
<head>
  <h1>
    Hello World from SJSU- {{inventory_hostname_short}}!
  </h1>
</head>
```

Creating a playbook for deploying the Apache server on the VM's

Install.yml

```
- hosts: apache
  become: true
  tasks:
    - name: install apache2
      apt: name=apache2 update_cache=yes state=latest
    - name: Copy your index file
      template:
        src: "index.html"
        dest: "/var/www/html/index.html"
```

Running the playbook

ansible-playbook -i hosts install.yml

```
272 — ubuntu@ip-172-31-20-20: ~/.ssh — ssh -i keypair.pem ubuntu@ec2-52-53-124-239.us-west-1.compute.amazonaws.co...
ubuntu@ip-172-31-20-20: ~/.ssh$ ansible-playbook -i hosts install.yml

PLAY [apache] *****
[
